VANI Seller-fit adaptive persona: built per seller before the call, adjusted live on Sarvam

Persona spec for all 149,363 sellers · every setting has a reason + evidence strength · 6 named live personas picked during the call by a Behaviour-Analyst agent · Saaras → Sarvam LLM → Bulbul, 11 spoken / 23 understood languages

SAMPLE PERSONA SPEC · "TIME-PRESSED" SELLER

Proprietor, corrugated-box trader, Aligarh (UP), turnover 0–40 L, past calls average 9 s.

Voice	female · **ishita** (crisp) · pace **1.12** Brisker: short past calls `short_call_history` · gender = VANI continuity informed guess
Language	**Hindi-led Hinglish**, respectful-casual ("aap", "ji") ~98% of UP sellers spoke Hinglish on past calls `language_by_state`
Tone	warmth medium · empathy medium Polite but brisk; acknowledge "busy" once, then move on
Opening	Check line → "Payal, IndiaMART" → purpose tied to *their box business* → ask for a time within 2 turns 17% of calls drop right after the identity line `identity_drop`
Personalisation	Category · executive visit in their city · **don't ask** "manufacturer or trader?" (already known)
Objections	1 busy → callback at their time · 2 call later → one concrete slot · 3 price → never quote; the executive covers it
Escalation	2× refusal → end politely · 2× frustration → apologise + callback · "don't call" → end + flag
Guardrails	Delivery only: facts, prices and compliance lines never change. Truthful if asked "are you a bot?"

PAST-CALL EVIDENCE BEHIND THE RULES

269,455 answered calls · baseline 11.5% meetings · 95% CI on every gap · observational (VANI had one voice)

3.2% meetings for sellers whose **earlier calls averaged <25 s** vs 8.2% for other repeat calls → shorter turns, ask early

14.2% for **new sellers** (GST 2024+) vs 9.9% → warm, lively voice, explain the benefit

8.8% for **turnover ≥ 1.5 Cr** vs 11.9% → concise, formal, value first

8.1% if **already with an executive** vs 11.7% → acknowledge it in the opening

6.3% after **past frustration** vs 11.5% → calm, slower, callback early weak, n=458

33% of **Tamil Nadu** sellers spoke mostly English vs ~2% elsewhere → English-first there

6 different prices quoted by today's VANI (from "2–3 thousand a month" to ₹37,760) → personas **never state prices**

~25% meetings at ≤1.5 s bot lag vs 4.6% above 3 s → adaptation must not add delay

WORKFLOW · DATA FLOW · INTEGRATION

1. **Seller file → persona generator** (rules + `ps04_evidence.json`): voice, language, tone, plan, a reason and a confidence per setting. Missing fields → defaults marked low confidence.
2. **Seller speaks → Saaras v3**: native-script transcript + romanized copy (two parallel calls) + language ID across 23 languages.
3. **Behaviour Analyst agent** (sarvam-105b-conversations) reads the last 6 turns: seller is calm / aggressive / rushed / confused / interested / suspicious, with intensity + trend. Phrase lexicons are the fallback and the aggression safety net.
4. **Persona Director** switches between 6 named personas (Friendly Guide, Calm De-escalator, Quick & Direct, Patient Explainer, Enthusiastic Closer, Transparent Reassurer) with hysteresis; back to Friendly Guide after 2 calm turns. Same voice, new delivery. Language mirroring runs alongside. Every switch → **switch log**.
5. **Sarvam LLM** writes the reply. Prompt layers: fixed facts + guardrails, then the seller's plan, then the live persona.
6. **Bulbul v3** speaks it with speaker, pace, expressiveness and language from the live persona. Sentences are synthesized in parallel.

🧩 **Distinctness across 149,363 sellers**: 200 distinct combinations of 9 key settings. Two random sellers differ on 3.7 of 9 settings on average. Seller types used to explain the logic: time-pressed 43% · standard 23% · new & receptive 14% · guarded 12% · established/formal 5% · already engaged 2% · do-not-call 1% (no call).

⚡ Live switch: seller says **"kitni baar call karoge yaar, dimaag kharab mat karo"** → analyst `aggressive 0.85 escalating` → **Friendly Guide → Calm De-escalator** (pace 1.02 → 0.88, expressiveness 0.75 → 0.3, empathy high). Reply: *"माफ़ी चाहती हूँ, परेशान करने के लिए... कौन सा time सही रहेगा, या मैं call end कर दूँ?"* Two calm turns later → back to Friendly Guide.

Code: `python -m vani_persona.ps04.generate` (all sellers) · `…ps04.server` (live demo) · `…ps04.simulate` (3-seller recording)

Evidence strength: moderate CI excludes 0, n ≥ 1,000 · weak · informed guess
